Notes and Assumptions

Section	Item	Detail
1. Source	Input data	Analysis_Workbook.xlsx, sheet "1. Master Timeline 2025-26, plus the announced 2026-27 MSP.
1. Source	Units	MSP Rs/quintal (nominal), Area lakh hectares, Yield quintal/ha
2. Data quality	Identity check	Production = Area x Yield / 1000 holds across all Column "Production Check" in the Master sheet r
2. Data quality	Known oddity	2021-22 yield is carried at 2797.647447 kg/ha - u back-computed from area and production rather
2. Data quality	MSP coverage	MSP is blank before 1975-76. All MSP statistics ar 76 onward only.
2. Data quality	Nominal MSP	No deflator was supplied, so MSP is nominal thro

Recommendations

Sum of Priority	Recommendation	Theme	Evidence
3	Treat the 2024-26 acreage surge as partly transitory; stage capex rather than underwriting the peak.	Capacity Planning	Area rose 478.3 to 512.3 lakh ha in 2024-26, up from 15-year trend of ~1.1% p.a.
4	Size buffer stock against a one-year downside band of roughly -8%, not against the average year.	Inventory / Buffer Policy	2026-27 production around a point of 15% below average at one year ahead - c assumption.
5	Assume structural margin compression and fund an offset in conversion efficiency or value-add.	Margin Strategy	Over 1975-2025 MSP rising 4.1x faster than 1991-2010 and is still
